# The oceans are changing rapidly

- Global “warming unequivocal” **“Very high confidence** that due to forcing by human activities”; By 2100, temperatures could increase **by 1.1° C – 6.4° C**
- Sea levels may rise by **18 to 59 cm.**
- Recent studies (Nature geoscience & Science) suggests sea level rise could be at **80 to 200 cm**

## Climate change report: 'The worst is yet to come' – as it happened

Threat of climate change is no longer distant, finds the Intergovernmental Panel on Climate Change.

- Climate change 'already affecting food supply'
- Great Barrier reef, native Australian species in danger
- The poor will suffer most from climate change
- 'Hellish monotony' of climate change report

Helen Davidson and Adam Vaughan

### FISHERIES

## Climate change at the dinner table

An innovative use of catch statistics shows that climate change has already influenced the composition of species in fisheries around the world, and thereby the fish that we eat. See Letter p.365

MARK R. PAYNE

Fisheries scientists tend to view climate change as a dark cloud on the horizon, but not of immediate concern. Over the multidisciplinary field of oceanography, the circulation and deoxygenation of the oceans are expected to have significant impacts on marine ecosystems and fisheries. In contrast, other problems, such as the global overfishing crisis, are more pressing. However, a recent paper garnered the field's attention for the past year by linking climate change to fish stocks. Cheung *et al.*<sup>1</sup> present startling evidence that global fisheries catches have already changed in a manner consistent with the warming trend. Climate change is suddenly an unexpected guest at the dinner table.

Changes in the spatial distribution of species are often used as an indicator of the impact of climate change on marine ecosystems<sup>2</sup>. Marine

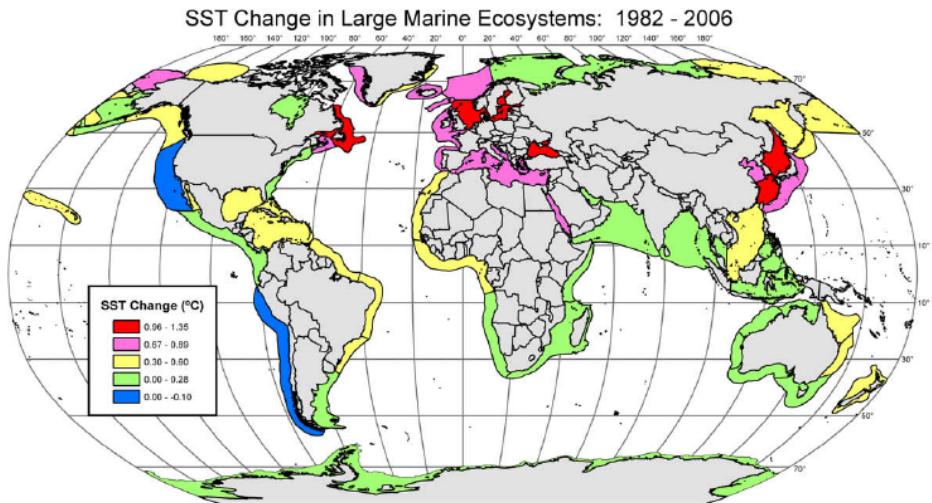

## Panel's Warning on Climate Risk: Worst Is Yet to Come

By JUSTIN GILLIS MARCH 31, 2014

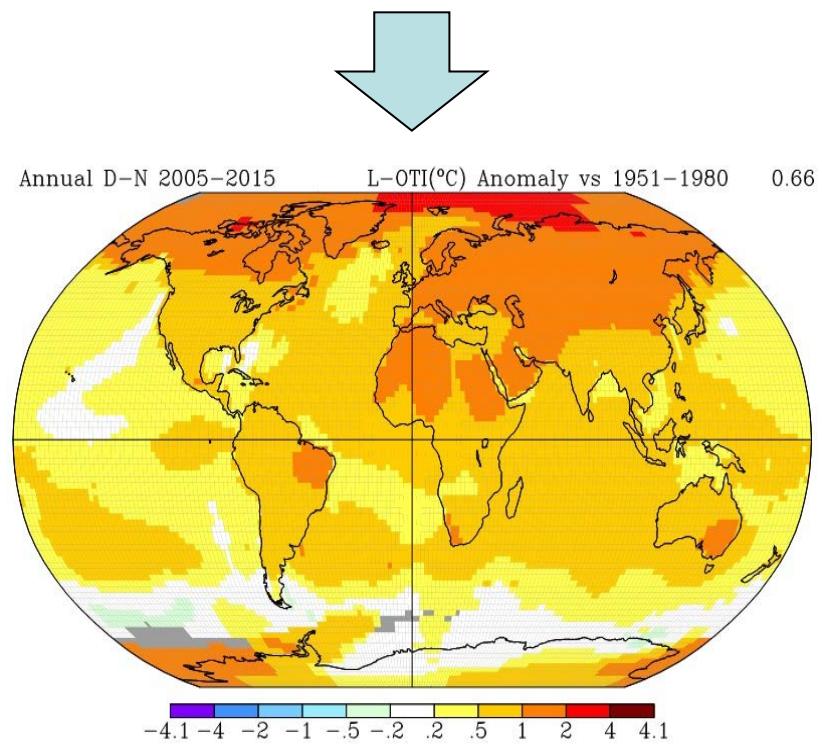

# Climate change

- **The rapid warming in 1982–2006 was confined to the Subarctic Gyre, European Seas, and East Asian Seas.**
- **The most rapid warming was observed in the land-locked or semi-enclosed European and East Asian Seas (Baltic Sea, North Sea, Black Sea, Japan Sea/East Sea, and East China Sea) and also over the Newfoundland–Labrador Shelf. (Belkin, 2009)**

Atmospheric surface temperature anomaly  
(average 2005-2015 relative to 1951-1980)

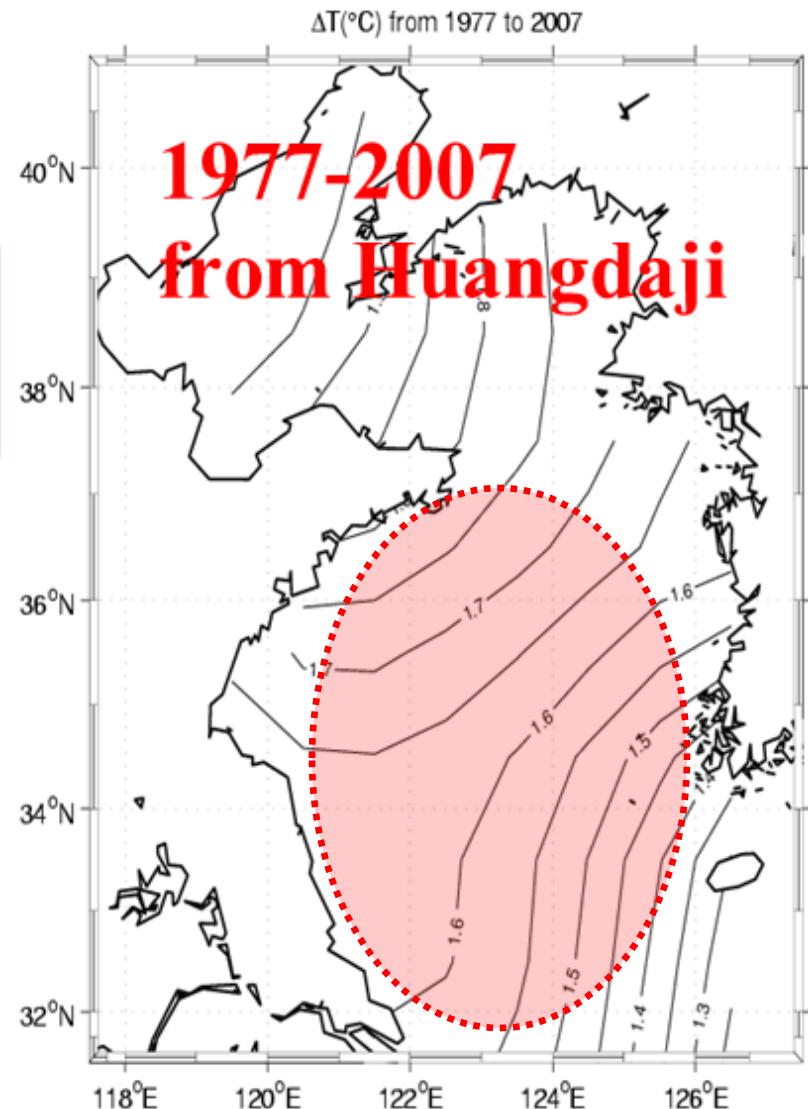

Data source: NASA

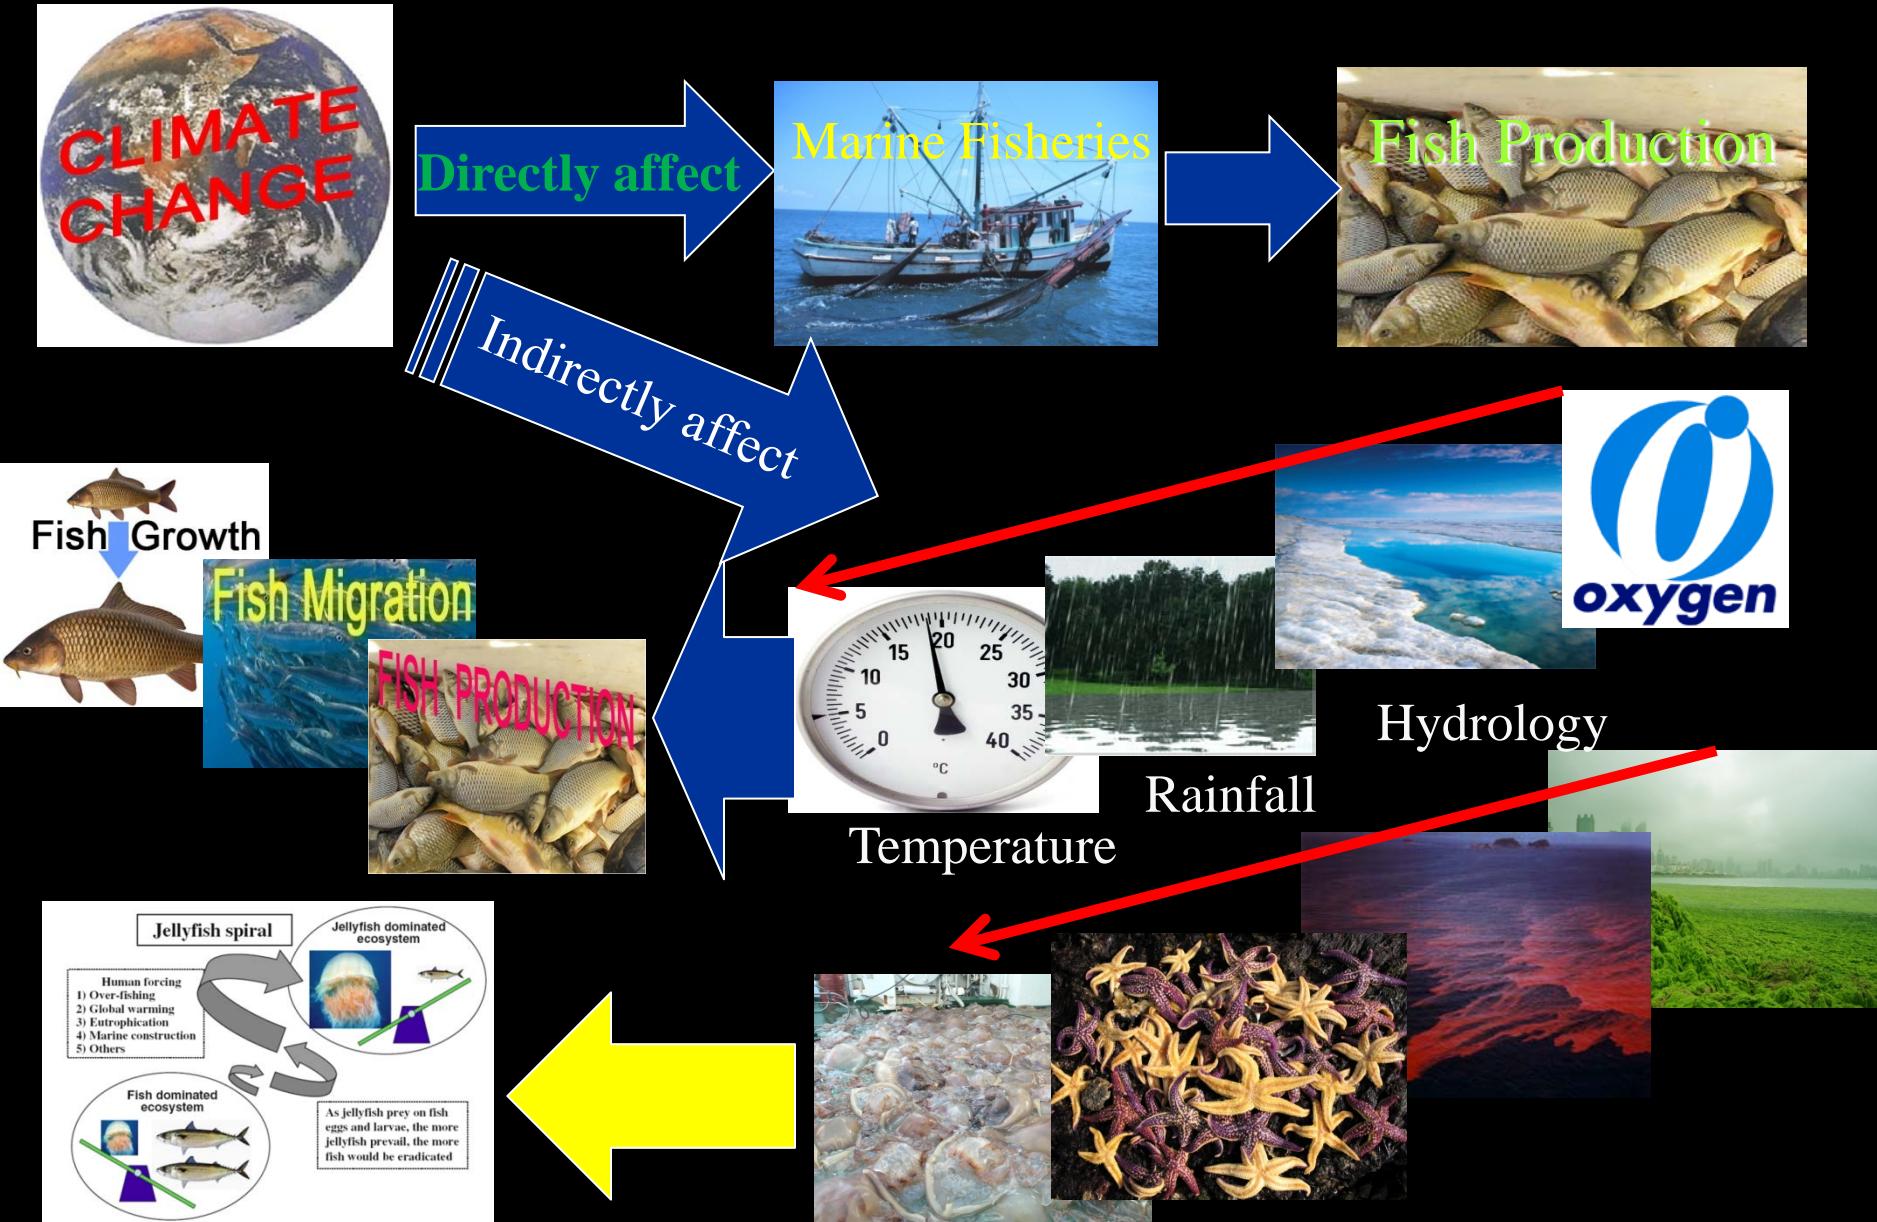

# SST warming in the Yellow Sea

SST in the Yellow Sea increased by  
**0.67°C** during 1982-2006  
(Belkin,2009)

SST in the Yellow Sea increased by  
**1.4-1.9°C** during 1977-2007, the rise of  
SST gradually increased from the  
Yellow Sea to the Bohai Sea(Huang,  
2010)

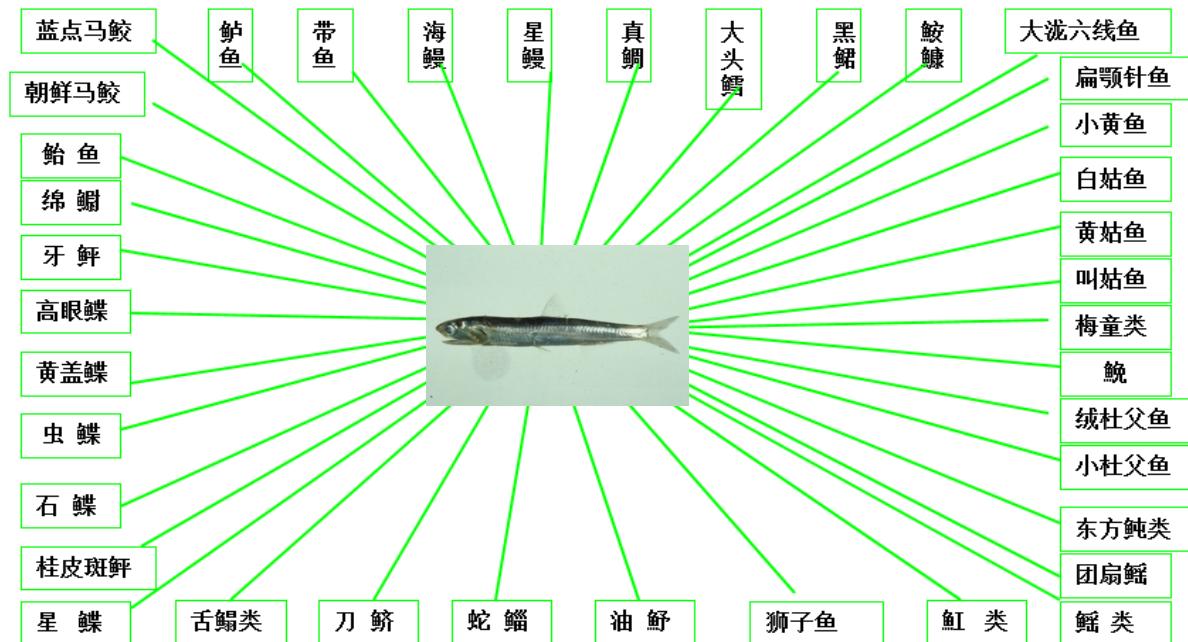

# Effects of Climate change on fish

# Anchovy in the Yellow Sea

# Multi-stressors during anchovy life history

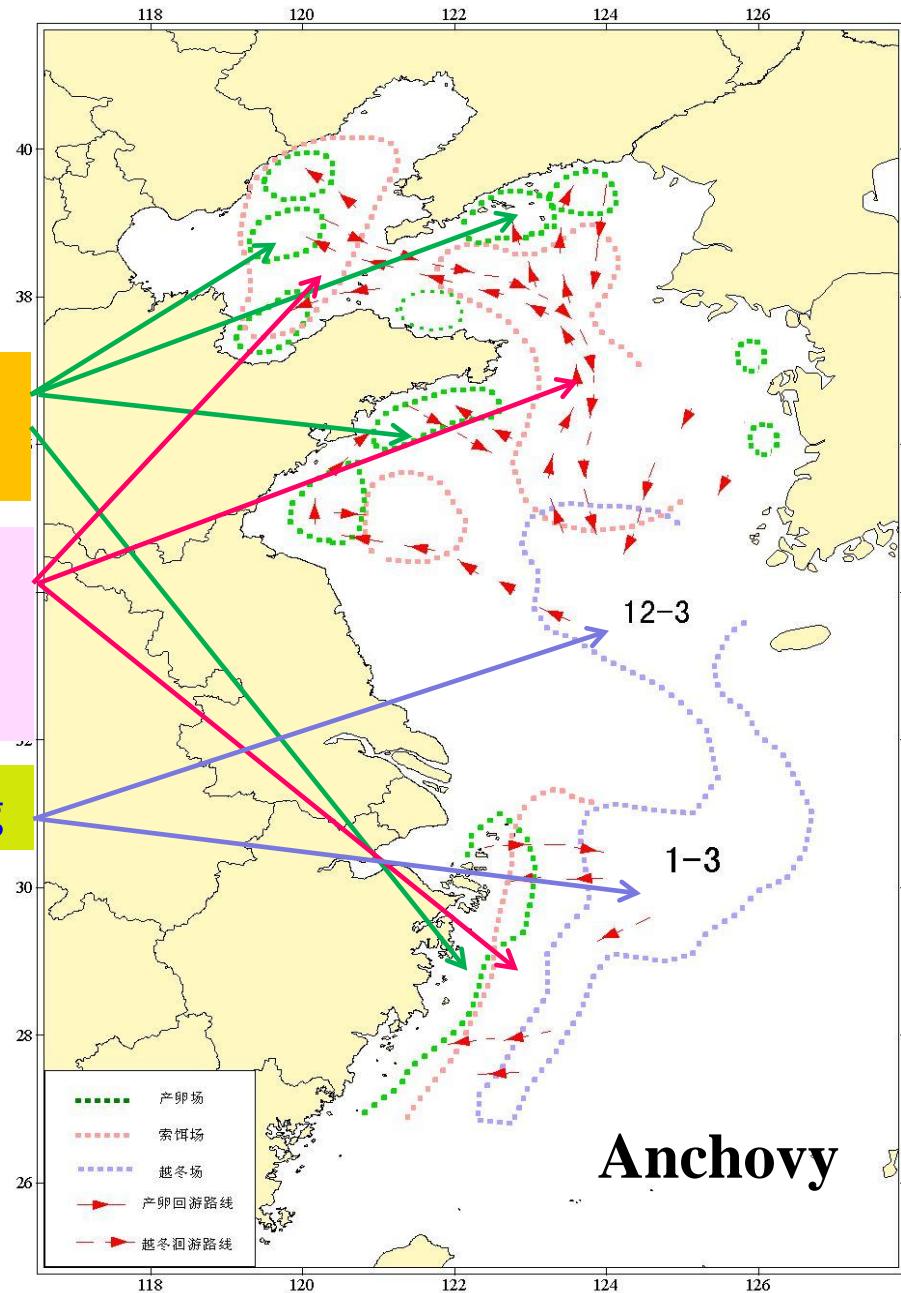

- Reclamation
- Pollution

Overwintering

# Japanese anchovy in the YS showed opposite changing trend when compared with northern anchovy

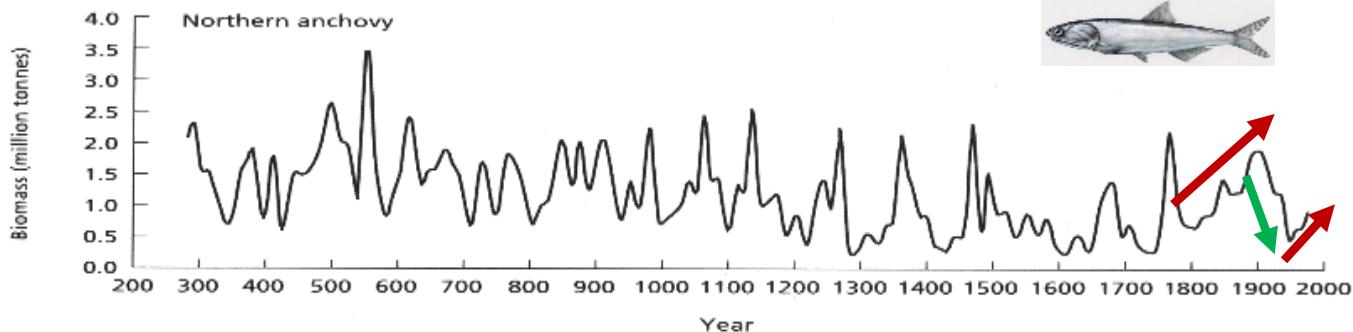

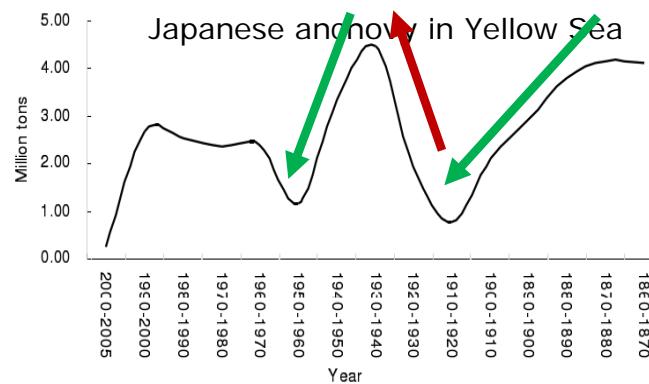

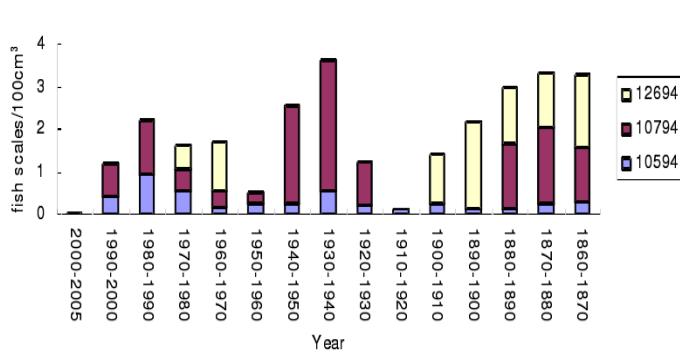

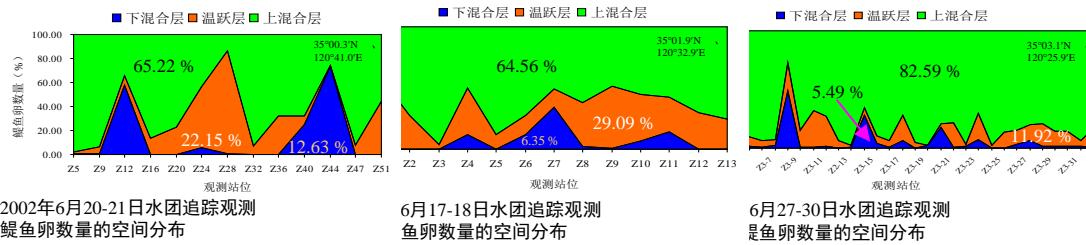

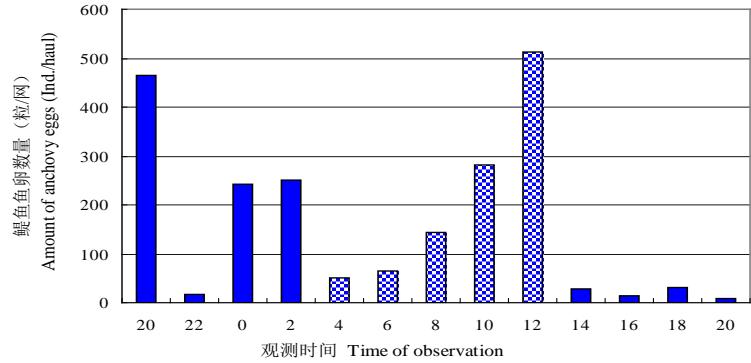

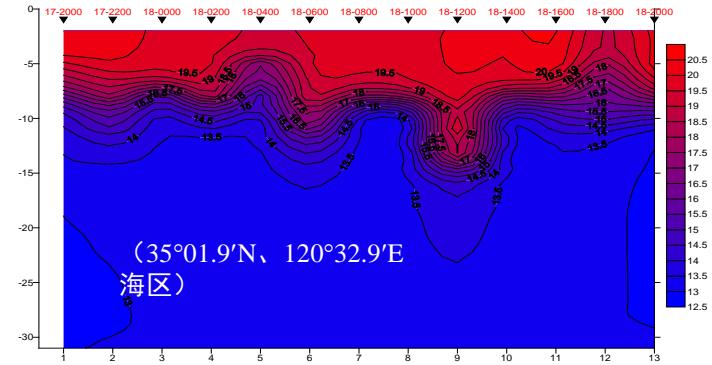

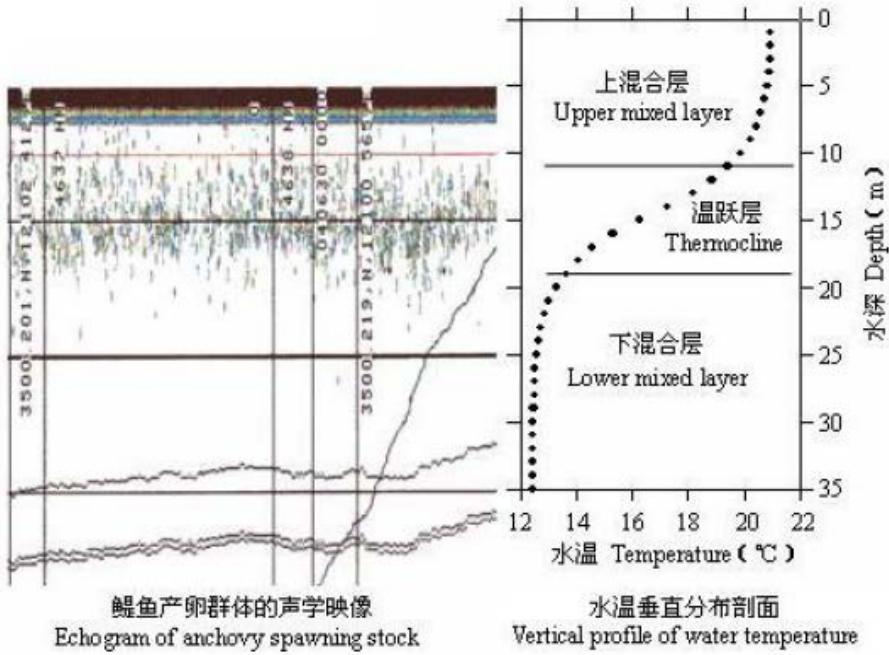

Fig. 4.1 Historical estimates of Pacific sardine and northern anchovy biomass off California. Biomass was estimated from scale deposition rates (density) in two sediment cores from the anoxic Santa Barbara basin. Scale deposition rate was assumed proportional to stock biomass because such relationships can be demonstrated using contemporary data. After Baumgartner *et al.* (1992).

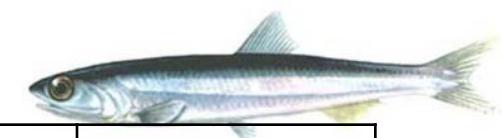

Jia & Sun, 2008

# Water temperature significantly impacted anchovy distribution

(Wan et al, 2008)

# Mortality of Japanese anchovy egg

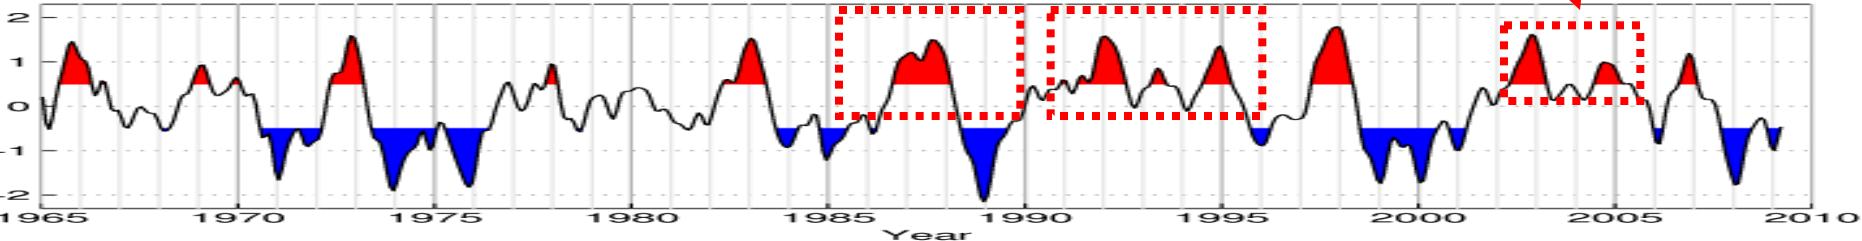

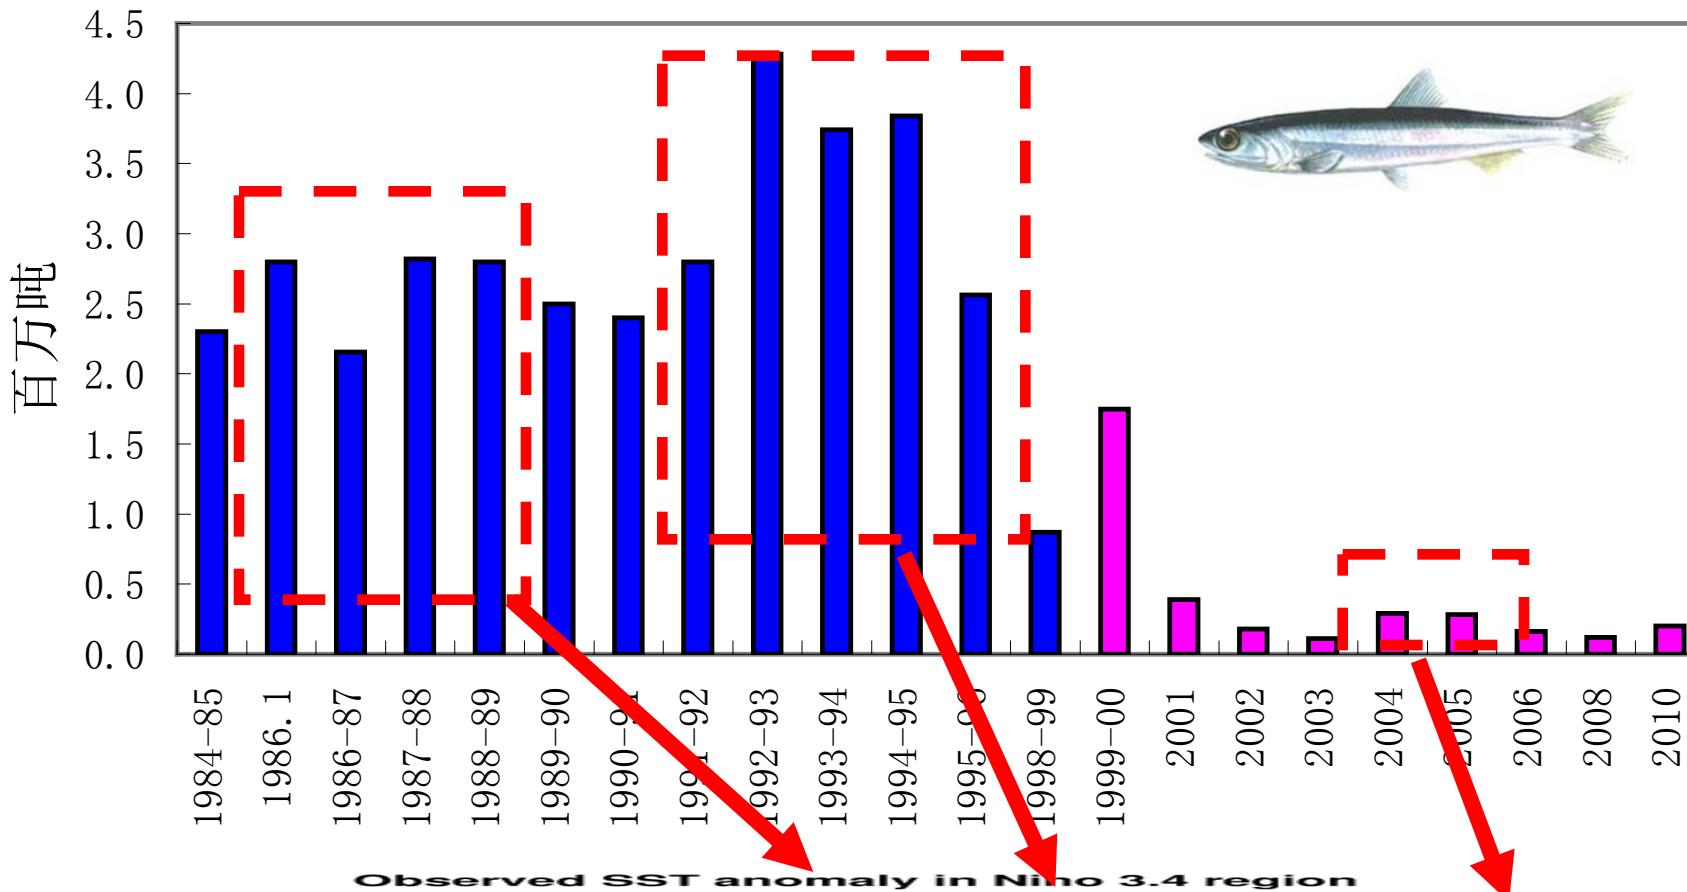

Sea areas	Survey time	Egg number (ind)	Natural mortality rate (%)
Southern Shandong peninsula	2000/06/13-06/18	28,907	83.41
	2001/05/16-07/6	86,872	84.87
	2002/06/05-06/20	51,231	81.34
	2003/06/11-06/17	175,115	80.42
	2004/06/10-06/19	124,510	75.22
<ul style="list-style-type: none"> <li>➤ Since the 1990s, the mortality of Japanese anchovy egg in the Yellow Sea greatly increased--</li> <li>➤ 1985-1988 (64%)</li> <li>➤ 1998-2000 (83%)</li> <li>➤ 2000-2008 (77-88%)</li> </ul>			
	2008/05/06	10,035	84.68
	Total	150,506	82.95
East China Sea and Yellow Sea	2001/03/26-04/24	14,379	88.09
Yellow Sea	1998/05/15-2000/12/18	59,838	83.57
Bohai Sea	1998/05/25-10/16	118,933	91.33
	1992/08/08-1993/06/07	2,722,102	85.61
Yellow Sea	1985/03/11-1988/06/14	800,999	64.10

Resilient nations.

A photograph showing the exterior of the Yellow Sea Fisheries Research Institute. The image features several modern, multi-story buildings with white or light-colored facades and numerous windows. In the foreground, there is a paved area with some greenery and a small sign that reads "黄海水产研究所". The sky is clear and blue. A large, semi-transparent red text box is overlaid on the center-left portion of the image, containing the message "Thank you for your attention!".

Thank you for  
your attention!
