Country	Change in carbon intensity
2012-2013	
World	↘ -1.2%
G7	↔ -0.2%
E7	↘ -1.7%
Australia	↘ -7.2%
UK	↘ -4.8%
Italy	↘ -4.1%
China	↘ -4.0%
South Africa	↘ -3.0%
EU	↘ -2.5%
Canada	↘ -2.5%
South Korea	↘ -2.4%
Japan	↘ -2.3%
Argentina	↘ -1.2%
Saudi Arabia	↔ -1.0%
Turkey	↔ -0.7%
Russia	↔ -0.7%
Mexico	↔ -0.3%
Indonesia	↔ -0.1%
France	↔ 0.3%
US	↔ 0.6%
India	↔ 0.9%
Germany	↗ 2.9%
Brazil	↗ 5.5%

Low Carbon Economy Index

What is CO₂ Capture and Storage (CCS)?

Saskatchewan coal. 1M tonnes CO₂/yr

Sleipner oil field CCS .0.9M tonnes CO₂/yr

Negative emissions via Bioenergy and CCS (BECS) –most widely selected by IAMS aimed at 2°C
Global decarbonisation 5-6% year : CCS in 5-40% of global power generation by 2050, including coal & gas

Risk assessment

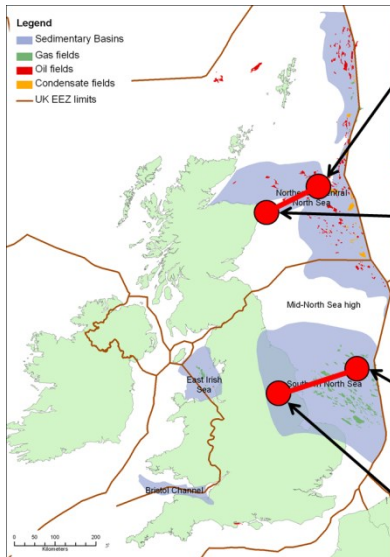

Source: QICS, Jerry Blackford

London Convention amendment

1972 Global agreement regulating disposal of wastes and other matter at sea

2006 (2012) amendment now allows CO₂ streams from CO₂ capture processes for sequestration

Offshore storage requirements now produced for the NE Atlantic through OSPAR into EU directive

UK CCS competition Two applicants for funding

**Peterhead-Goldeneye
(Shell)**
Gas fired
Depleted gas reservoir
10 MT

**White Rose
(Alstrom, Drax, BOC,
National Grid)**
Coal fired
Saline aquifer
2MT/A

Empirical research: local impacts of leakage

ECO₂ project number: 265847

Deliverable 4.1: Potential impact of CCS leakage on marine communities
WPA lead beneficiary: Plymouth Marine Laboratory

Potential impact of CCS leakage on marine communities

Ana M Queirós, Karl Vetter, Teresa Amaro, Joana Nunes, Denise Comagere, Espen Voldstad, Kai Ingvang, Carolee Burt, Mikko Winkler, Robert Dunbar, Espen Rønne, Elizabeth Ayle, Chris De Vries, Jan Kowal, Tessa Chiffoleau, Marina Malm, Giuseppe Ingrassia, David Forrester, Andy Espino, Ruyana Gomes, Ann Yvonne, Maximilian Müller, Andy Espino, Alina Rønne, Frank Wenzler, Dirk de Roo, Mirjam Weber, Stefan Grötker, Nikolai Bratkov, and Ingvang Winkler

3.6 Disturbance and bio-irrigation

Distribution (i.e. the biogenic mixing of sedimentary particulates resulting from the displacement of materials during faunal feeding, scavenging and burrow construction) and bio-irrigation (flushing of burrows by burrowing fauna) can be used to assess the overall activity of faunal regions. This is because metabolically challenging environments, such as

QICS **Quantifying and monitoring potential ecosystem impacts of geological carbon storage**

INTERNATIONAL JOURNAL OF Greenhouse Gas Control

EGU General Assembly 2007 Abstracts in CO₂ Storage in Geological Systems (IGUS 2007)

Empirical research: local impacts of leakage

Laboratory based studies:

variable effects of CO₂

species, habitat, dose and exposure time

CO₂ but almost no hypoxia and/or salinity

ECO₂: hypoxic brines far more harmful than CO₂

Vent based studies and QICS:

small effects

comparable to natural spatial / temporal variability

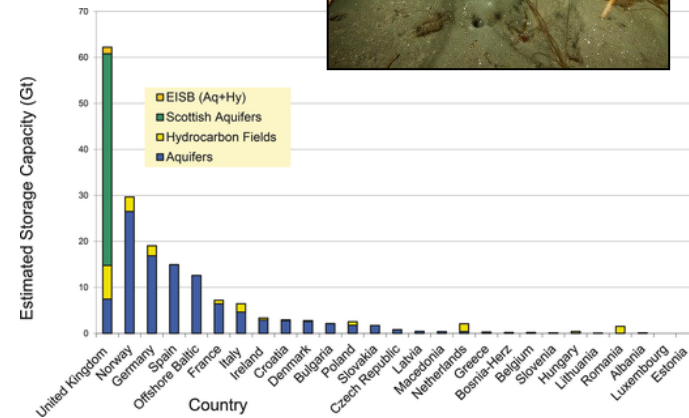

no investigation of hypoxia and salinity

Local focus

Realistic leak scenarios?

Little/no integration of evidence

Socio-economic focus: global human benefits

European storage capacity

Source: Stewart et al. 2014 Greenhouse Gas Sci Tech

Aims

- 1: integrate experimental local CCS impacts evidence from simulated leakage scenarios in marine systems
- 2: compare local impacts with global benefits for marine systems derived from CCS as an emissions curbing strategy

The work presented is ongoing and unpublished, so sensitive material has been removed, sorry.

However if you are interested in our work and would like to have some more information please do get in touch with Ana on anqu@pml.ac.uk.
